RAKO IPHONE APP

£350 + VAT

DSE are pleased to announce an exciting update release which allows control of a Rako installation from an iPhone™ or iPod Touch™. This gives control of any room, whether it be lighting or curtain/blind control.

The update provides access to the available rooms, scenes and channels, all of which can be named for easy identification. The App can be used with existing wireless systems, the new wired network or combined systems.

To allow the iPhone to connect with the network, a Rako bridge is required which communicates with your existing WiFi network and iPhone or iPod Touch.

The update is available now for only £350.00 + VAT which includes installation and programming of any adjustments to your existing scene levels.
